

# Got a problem on your hands?

## Lectratek consultants can help.

### ADVANCED AEROSPACE & DEFENSE ENGINEERING CONSULTANTS CAN HELP WITH:

- Custom battery cell technology
- Performance optimization
- Powertrain
- Propulsion
- System integration
- Trade space analysis
- Troubleshooting

### WHAT MAKES A LECTRATEK CONSULTATION THE BEST?

Our unique partnership with Cornerstone Research Group provides access to a top U.S. aerospace and defense firm. Since 1997, CRG has been a go-to for the federal government and military. Our team of experts specializes in solving complex science and engineering problems in high-profile fields such as aerospace systems, AI optimization, power and energy, and advanced materials and manufacturing.

Previously reserved solely for U.S. Government customers, CRG and Lectratek have formed a partnership to provide this high-level of expert guidance to our commercial partners.

### HOW MUCH SHOULD I PLAN TO ALLOCATE FOR THIS SERVICE?

Every project is unique and the number of hours required will vary greatly depending on complexity, scope, and requirements. For example, designing a complete powertrain from scratch may be in the seven-to-eight figure range, while troubleshooting may be in the thousands.

Let's talk about your specific challenges. We can provide an estimate to help your project soar to new heights.
